

DO NOT restrict XM Radios content in any way! The NAB knows that XM has a better product so they want to use the FCC to protect their turf instead of improving their programming choices. The NAB knows that broadcast radio can't provide the choices that XM does, so they want the FCC to bail them out by restricting what XM listeners can listen to. I am paying for this service and I should be able to listen to any programing the XM is able to or wants to provide. If XM radio wants to provide local weather and traffic reports it should be able to do so like any other company that wants to provide a product to their customers.
